

Jinhee Mok

AI Engineer (Agents & Automation)

jinheemok815@gmail.com · github.com/Jin-tonix · jin-tonix.github.io

Summary

- Sole engineer for the internal AI systems at StyleSeller, a Korean social-commerce platform: design, build, deploy, and operate.
- Ship agents that run on real business channels without a usable official API (KakaoTalk personal chats, Instagram seller discovery), with test-room switches, approval queues, and kill switches.
- Career changer (law degree, then teaching and operations); writing code since Feb 2026 with Claude Code, owning architecture, rules, verification, and rollout.

Experience

StyleSeller — Developer, AI & Automation (sole owner) · Dec 2025 – Present

- Sole developer of StyleSeller's internal AI system: a staff web app, a KakaoTalk vendor-support agent, a company data assistant, and tools on 11 staff PCs, all in production.
- Replaced a spreadsheet pricing sheet with an internal web app; 14 live screens incl. login (as of 2026-09-23). Prices are computed in code; the LLM only returns fields to edit as JSON, checked against 43 calculation test cases.
- Designed a vendor-support agent over staff KakaoTalk accounts (no official API): desktop collectors, a tool-calling answer loop over a company knowledge graph, and sends from staff Macs with delivery confirmation. Auto-replies ran in live vendor rooms Aug–mid Sep 2026; since 2026-09-15 an improved version runs in a test room while staff reply from an extension panel over the same sender. Company-wide tools are blocked for this external bot (fail-closed).
- Blocked cross-vendor data leaks with three layers: workspace isolation, tool-level redaction, and a fail-closed LLM judge (temperature 0, 5 s timeout), after an incident on 2026-08-13.
- Built Spark, a chat assistant over 4 business databases with cited answers; queries run only under read-only DB roles, and the server re-derives the caller's role from the database.
- Built a Tool Registry gate (dry-run default, kill switch, DB-rechecked approval, idempotency key; 20 tools, 2026-09-23); today only internal actions run after approval, external sends are logged.
- Deployed tools to 11 staff PCs (6 macOS, 5 Windows, as of 2026-09-16) with one-line install, sha256-based auto-update, and per-device keys, so no database key lives on a PC.
- Migrated a cloud database that hit its data-transfer limit to self-hosted Postgres + PostgREST on a GCP VM on the same day it went down (2026-08-20), without changing app code.

We:Review (Welead) — Intern · Aug 2025 – Oct 2025

- Built an OCR + LLM receipt-review pipeline as a solo project.

Selected Systems

- **SS work tool (brand-tool)** — pricing, proposals, catalog parsing with Gemini, partner matching, seller search, targeted KakaoTalk; also the business data backend for the vendor-support agent and Spark. (Mar 2026 – present)
- **Email agent · knowledge hub** — grounded reply drafts with a critic-and-rewrite loop for the brand and order shared mailboxes; 13 LightRAG workspaces shared by other systems. CEO-inbox auto-drafts paused since 2026-09-02. (Mar 2026 – present)

Skills

- **AI / Agents:** tool-calling agents, MCP (4 servers built), GraphRAG (LightRAG, Neo4j, pgvector), LiteLLM, Gemini 2.5 Flash, human-in-the-loop gates, LLM judges, Claude Code
- **Backend:** Python, FastAPI, TypeScript, Node.js/Express, Next.js 16, PostgreSQL, PostgREST
- **Frontend / Desktop:** React 19, Tailwind 4, Chrome Extension MV3, Playwright/CDP, Swift (macOS), PowerShell
- **Infra:** Docker Compose/Swarm, GitHub Actions, GCP VM, nginx, n8n
- **Training projects (2024):** Java, Spring Boot, MySQL, Vue.js, Flutter, LangChain

Education & Training

- Generative AI Developer Program, Korea IT Business Promotion Association — May–Jul 2025
- AI Course (Oct–Dec 2024) and Full-Stack Course (Apr–Oct 2024), Himedia Academy
- Business Administration (degree program), Academic Credit Bank System — Feb 2021 – Jun 2023
- LL.B., Cheongju University — Mar 2008 – Feb 2012
