Jinhee Mok

AI Engineer (Agents & Automation)

jinheemok815@gmail.com · github.com/Jin-tonix · jin-tonix.github.io

SUMMARY

- Design, build, deploy, and operate the internal AI systems at StyleSeller, a Korean social-commerce platform.
- Ship agents that run on real business channels without a usable official API (KakaoTalk personal chats, Instagram seller discovery), with per-room allowlists, approval queues, and kill switches.
- Career changer (law degree, then teaching and operations); at StyleSeller since Dec 2025, building with Claude Code while owning architecture, rules, verification, and rollout.

EXPERIENCE

StyleSeller — Developer, AI & Automation · Dec 2025 – Present

- Design, build, and run StyleSeller's internal AI system: a staff web app, a KakaoTalk vendor-support agent, a company data assistant, and a seller collector program on 11 staff PCs, all in production.
- Moved Google Sheet pricing into an internal web app; 18 staff work screens excluding login (as of 2026-09-23). Prices are computed in code; the LLM only returns fields to edit as JSON, and the same calculation code recalculates amounts, checked against 43 calculation test cases.
- Designed a vendor-support agent over staff KakaoTalk accounts (no official API): desktop collectors, a tool-calling answer loop over a company knowledge graph (Gemini 2.5 Flash via LiteLLM), and sends from staff Macs with delivery confirmation. It answers only questions tagged to it in real vendor rooms; when it cannot identify the vendor or answer, it hands the question and the conversation to the person in charge in Slack. Company-wide tools are blocked for this external bot (fail-closed).
- Contained cross-vendor data leaks after an incident on 2026-08-13 with workspace isolation and tool-level redaction of other vendors' names; regex now only triggers a check, and the LLM makes the call.
- Built Spark, a chat assistant over 4 business databases with cited answers; queries run only under read-only DB roles, and the server re-derives the caller's role from the database.
- Built a Tool Registry gate (dry-run default, kill switch, DB-rechecked approval, idempotency key; 20 tools, 2026-09-23); today only internal actions run after approval, external sends are logged.
- Deployed a seller collector program to 11 staff PCs (macOS and Windows) with one-line install, sha256-based auto-update, and per-device keys, so no database key lives on a PC.
- When a cloud database hit its data-transfer limit (2026-08-20), stood up the same API (PostgREST) on a GCP VM, kept the database access code unchanged, swapped only connection settings, and recovered the same day. The web app runs on Vercel; FastAPI services, databases, and the LLM proxy run in Docker on the VM.

We:Review (Welead) — Intern · Aug 2025 – Oct 2025

- Built an OCR + LLM receipt-review pipeline.

SELECTED SYSTEMS

- **SS work tool (brand-tool)** — pricing, proposals, Gemini catalog parsing into product candidates that staff confirm, sales-partner matching, seller search, and the sending automation for personalized KakaoTalk campaigns (recommendations come from a colleague's CRM); also the business data backend for the vendor-support agent and Spark. (Mar 2026 – present)
- **Email agent · knowledge hub** — grounded reply drafts (Gemini 2.5 Flash) for the brand and order shared mailboxes: claims are checked by rules and an LLM verifier, rewritten, and the draft is dropped if they stay unsupported; 13 LightRAG workspaces shared by other systems. (Mar 2026 – present)

SKILLS

- **AI / Agents:** tool-calling agents, MCP (4 servers built), GraphRAG (LightRAG, Neo4j, pgvector), LiteLLM, Gemini 2.5 Flash, human-in-the-loop gates, LLM judges, Claude Code
- **Backend:** Python, FastAPI, TypeScript, Node.js/Express, Next.js 16, PostgreSQL, PostgREST
- **Frontend / Desktop:** React 19, Tailwind 4, Chrome Extension MV3, Playwright/CDP, Swift (macOS), PowerShell
- **Infra:** Docker Compose/Swarm, GitHub Actions, GCP VM, Vercel, nginx, n8n
- **Training projects (2024):** Java, Spring Boot, MySQL, Vue.js, Flutter, LangChain

EDUCATION & TRAINING

- Generative AI Developer Program, Korea IT Business Promotion Association — May–Jul 2025
- AI Course (Oct–Dec 2024) and Full-Stack Course (Apr–Oct 2024), Himedia Academy
- Business Administration (degree program), Academic Credit Bank System — Feb 2021 – Jun 2023
- LL.B., Cheongju University — Mar 2008 – Feb 2012
