Profile

I identify repetitive business processes, build AI agents and automation to handle them, and own their deployment and operation in production.

On StyleSeller's business team, I automate partner support, email replies, data management, and price calculation. I own each system end to end: analyzing the work, designing and building it, deploying it to staff PCs, and fixing it in production.

I decide which steps belong in fixed rules and which need an LLM, weighing cost against accuracy. The goal is a system staff keep using.

Experience

StyleSeller | AI & Automation PL

2025.11 – Present

- Built LLM agents for partner support, email replies, and internal data queries
- Automated KakaoTalk and email collection, partner records, product registration, price calculation, and partner matching
- Built a skill router that scored 90.15% on a 132-case evaluation, with LLM call cost estimated at about 1/10
- Built a LightRAG-based internal knowledge hub and evidence-verification system
- Deployed tools to 11 staff PCs (Windows collector updates by reinstall), restored service the same day after a cloud DB outage, and migrated 4 DBs to self-hosting

We:Review | AI Development Intern

2025.08 – 2025.10

- Automated extraction and review of products and prices from receipts using OCR and an LLM
- Raised review accuracy from 70% to 95%
- Reduced review time by 85% (based on my own measurements)
- Stack: Python, PaddleOCR, DBSCAN, Qwen-family LLM, FastAPI

Key Projects

1. Agent Platform and Skill Router

- Designed a pipeline in which BM25 search and Jev scoring narrow the shared skills (115 at rollout) before Gemini makes the final pick
- Scored 90.15% (119 of 132) on a 132-question set (new when introduced, later reused in tuning)
- Cut the skills Gemini reads from 115 to 5, with cost estimated at about 1/10

2. Vendor CS Agent

- Built the full flow: KakaoTalk message collection, partner identification, reply drafting, evidence checks, and sending
- Fixed duplicate message collection and reduced send failures
- Fixed macOS sends failing 31 of 147 times (21%) with a timeout and delivery confirmation

3. Partner Status Board and Operations Ledger

- Unified deal records scattered across KakaoTalk, email, Slack, and order sheets
- Puts the deal stages of hundreds of partners on one screen
- Collects 100–200 records each weekday; built in 5 days

4. LightRAG Knowledge Hub and Email Agent

- Built an internal knowledge search service shared by multiple agents
- Checked draft claims against source evidence and discarded drafts that failed
- 4 agents share 13 workspaces

5. Internal Work Tool and Pricing & Product Automation

- Moved Google Sheets pricing formulas into code
- Extracted product data from catalogs, registering items only after staff confirmation
- Passed 43 price-calculation test cases; sent personalized KakaoTalk messages to 261 people in one day

Skills

AI / LLM	Gemini, LiteLLM, RAG, LightRAG, Tool Calling, MCP, LLM evaluation and verification
Backend	Python, FastAPI, TypeScript, Node.js
Frontend	React, Tailwind CSS
Database	PostgreSQL, pgvector, Neo4j, Redis, PostgREST
Infrastructure	GCP, Docker, NGINX, GitHub Actions
Automation	n8n, Google Apps Script, Slack, Gmail, kakaocli

Education & Training

- Cheongju University, Law (2008.03 – 2012.02)
- Academic Credit Bank System, Business Administration (2021.02 – 2023.06)
- Himedia Academy, Full-Stack Program, 960 hours (2024.04 – 2024.10)
- Himedia Academy, Advanced AI Program (2024.10 – 2024.12)
- Korea IT Business Promotion Association, Generative AI Program (2025.05 – 2025.07)
